## Biloela students learn practical road safety skills

Twenty-four year 12 students from Biloela High School completed a rigorous defensive driving course this month under the JBOYS programme, with the support of CS Energy's Callide Power Station.

On Monday, 29 May representatives from CS Energy's Callide Power Station presented the students with certificates, following the completion of their JBOYS defensive driving course earlier in May.

JBOYS, or Jimmy Bryant's Outback Youth Support, is a local not-for-profit organisation which helps educate young people on safe driving and provides support and welfare services to youth in rural Australian communities.

The students attended a two-day student driver course at Roadcraft Driver Education in Gympie.

The Roadcraft Driver Education teaches student drivers practical techniques, including how to drive defensively in wet and dry road conditions, how to avoid hazardous situations, and how human limitations can be a killer.

The students are the first group to go through the program in 2017. JBOYS plans to provide the training for the remainder of the Year 12 students later this year.

### About CS Energy

CS Energy is a Queensland energy company that has more than 400 employees, operates three power stations and has a trading portfolio of 4,035 megawatts.

CS Energy operates the 1,510 megawatt Callide Power Station near Biloela in Central Queensland, the 750 megawatt coal-fired Kogan Creek Power Station, near Chinchilla in South West Queensland and the 500 megawatt pumped storage hydroelectric Wivenhoe Power Station, near Esk in South East Queensland. CS Energy's coal resources include the Kogan Creek Mine.

The company is also party to the Interconnection and Power Pooling Agreement that entitles the company to trade the output of the Gladstone Power Station in excess of the requirements of the Boyne Aluminium Smelter.

CS Energy Chief Executive Officer Martin Moore is on the Board of the Australian Energy Council, which represents major electricity and gas businesses operating in competitive wholesale and retail energy markets.
