Dear Neighbour,

Brigalow Peaking Power Plant deliveries

The Brigalow Peaking Power Plant is a 400 MW gas-fired peaking plant being jointly developed by CS Energy and APA. The project is being constructed on CS Energy land to the east of Kogan Creek Power Station and will provide dispatchable generation capacity to support Queensland's energy system during periods of peak demand.

Residents and road users may notice an increase in heavy vehicle movements travelling the Port of Brisbane via Dalby and Kogan to the project site adjacent to Kogan Creek Power Station. Deliveries will be made between 10 and 19 November to support the construction of the Brigalow Peaking Power Plant.

Traffic and transport information

The impact on road users is expected to be minimal. The deliveries do not require changes to speed limits, traffic management, escort vehicles or lane closures on Banana Bridge Road.

The deliveries will be undertaken in a similar manner to previous deliveries to Kogan Creek Power Station and have been scheduled over several days to minimise impacts on the local road network and surrounding community. The project team will continue to work closely with the transport contractor to ensure deliveries are completed safely and efficiently, with minimal disruption to the public.

The deliveries will be transported from the Port of Brisbane via Dalby and Kogan to the project site adjacent to Kogan Creek Power Station.

If you have any questions or concerns, please contact us on **1800 318 500** or send us an email **energyinfo@csenergy.com.au**

Thank you for your understanding and cooperation.

Regards,

CS Energy
